

RELEASE NOTES

IRS 1.1
November 12, 2010

INTRODUCTION

The following listing describes changes to the IRS application that are included in IRS 1.1. Please review the “IRS Data System Training manual.pdf” for detailed information about some these changes.

SECURITY

1. The built-in software updating capability has been enhanced so that users may now download and install minor and major updates to the software, including updates to the structure of the database.
2. Database backups are encrypted.
3. User passwords are always masked (not displayed).

WAYPOINTS

4. Changed from “Reasons” field to “Structures” field.
5. Using “Household ID” instead of “Structure ID.”
6. Change Waypoint listing to reflect these changes:

Waypoints

To import waypoints, place the .gpx files generated from MapSource in C:\irs\webapps\archive\MIG\waypoints\new\ and press the following link:

- [Import Waypoints](#)

Waypoint Listing

DATABASE

7. Updated to Derby 10.6.2.1

REPORTS

8. The link to the BIRT report sample has been removed. The removal of BIRT reports, which were not being used, greatly reduces the size of the application.

LINK TO DATA OUTPUT

The link to the .csv (excel) data output has been moved from the Report section to the Config page:

Data Output

Output data to .csv and synchronise with the Master server.

- **Output .csv files** - Outputs records to .csv and archives to a .zip.
- **Upload new records** - Synchronisation with Master Site

DOCUMENTATION

9. Updated documentation to reflect the following changes:

- a. Waypoints changes
- b. Site Publishing instructions –Site setup
- c. Backup Restore
- d. Resetting an IRS instance (deleting all records)
- e. Adding sites for Master sync.
